*Textile Solutions*

It is with this motivation that OFM launches the *elements* program of fabric and vinyl upgrades to specific items within our established product line. New fabrics, new colors, new patterns... all here to encourage ideas, compliment spaces & assist you in personalizing *your* environment.

*elements* is a reflection of the OFM brand that is continuously responding to the environment around us. With the introduction of this program, we are bringing to our clients the same stable foundation of products that our existing customers know and trust, with a brand new face that will offer attributes that can be found with no other manufacturer.

Our products, which as always, will be in-stock for immediate delivery, will feature textiles that are 100% post industrial recycled content, Cryptons®, anti-bacterial/anti-microbial protection, marine-grade and Greenguard Certified®. OFM has aligned itself with Momentum and CF Stinson, two of the biggest names in the contract textile world, in order to offer these unique combinations to our dealers.

Experience the *elements*.
